

# ULTIMA CREATIO

## Current Project Status – Governance-Oriented AI Infrastructure

This document summarizes the current development status of ULTIMA CREATIO as of the present phase.

### 1. Concept & Architecture

- Core architectural philosophy defined (Separation of Intelligence and Governance).
- Layered system model finalized (6-layer architecture).
- Governance framework conceptualized (No-Bypass, State-Diff-Only logic).
- Role hierarchy structure formally defined (AbsoluteAdmin, OGAdmin, Admin, Member).

### 2. Technical Readiness

- Architecture documentation completed.
- Integration model with agent-based systems defined at structural level.
- Governance logic formalized conceptually.
- Preparation phase for MVP scoping and implementation planning.

### 3. Immediate Next Milestones

- Finalize MVP scope and core module definition.
- Prototype Orchestrator Core framework.
- Design governance validation mechanisms.
- Establish experimental sandbox integration pathway.

The project is currently in the structured architectural phase, transitioning toward technical prototyping and MVP execution.
